Question 2: Is there a relationship between 40yd dash times and vertical jump by position?

```
In [4]:  # Create scatter plot using plotly.js
         fig = px.scatter(df,
                          x="40yd",
                          y="Vertical",
                          color="Pos",
                          hover_name="Player",
                          title="40yd Dash Time vs. Vertical Jump by Position",
                          labels={'40yd': '40yd Dash Time', 'Vertical': 'Vertical Jump Height'},
                          opacity=0.6)

         fig.show()
```

40yd Dash Time vs. Vertical Jump by Position
